Nutritional Composition of Beach Cliff Sardines in Water

Understanding the nutritional composition of beach cliff sardines in water is critical for evaluating their role in a healthy diet. These sardines are notable for their balanced macronutrient profile, including protein, fats, and carbohydrates, while being low in calories. Typically, a 3.75-ounce (approximately 106 grams) serving of beach cliff sardines in water provides a significant amount of high-quality protein along with beneficial omega-3 fatty acids. The absence of added oils or sauces in the water-packed variety also reduces fat content, making it a leaner option compared to sardines packed in oil.

Macronutrient Breakdown

Beach cliff sardines in water primarily consist of protein and healthy fats, with negligible carbohydrates. The macronutrient composition per serving is approximately:

- **Protein:** 20 to 23 grams
- **Total Fat:** 5 to 7 grams, including omega-3 fatty acids

- **Carbohydrates:** 0 to 1 gram
- **Calories:** Approximately 120 to 160 kcal

The protein content supports muscle maintenance and repair, while the omega-3 fatty acids contribute to anti-inflammatory properties and cardiovascular health.

Fatty Acid Profile

Beach cliff sardines in water are an excellent source of essential omega-3 fatty acids, including eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA). These fats are crucial for brain function and reducing the risk of chronic diseases. The water-packed sardines tend to have slightly lower total fat but retain significant omega-3 content due to the fish's natural composition.

Health Benefits Associated with Sardine Consumption

The consumption of beach cliff sardines in water confers multiple health benefits, primarily due to their dense nutritional content and bioactive compounds. Regular intake aligns with dietary recommendations for cardiovascular health, bone strength, and inflammation reduction.

Cardiovascular Health

The omega-3 fatty acids in sardines have been extensively studied for their ability to lower triglycerides, reduce blood pressure, and improve endothelial function. These effects collectively decrease the risk of heart disease. Additionally, the low saturated fat content in water-packed sardines supports healthy cholesterol levels.

Bone and Joint Health

Beach cliff sardines are a natural source of calcium and vitamin D, both vital for maintaining bone density and preventing osteoporosis. The presence of phosphorus and vitamin B12 further contributes to skeletal strength and joint health.

Anti-Inflammatory and Immune Support

The omega-3 fatty acids and selenium found in sardines exhibit anti-inflammatory properties that may help modulate immune responses. This makes sardines beneficial for individuals with inflammatory conditions or those seeking to enhance immune function.

Vitamins and Minerals in Beach Cliff Sardines

Beach cliff sardines in water are rich in a variety of essential vitamins and minerals that support numerous physiological functions. Their micronutrient density makes them a highly nutritious seafood choice.

Key Vitamins

- **Vitamin B12:** Critical for red blood cell formation and neurological function.
- **Vitamin D:** Enhances calcium absorption and supports immune health.
- **Vitamin B3 (Niacin):** Supports energy metabolism and skin health.
- **Vitamin B2 (Riboflavin):** Important for energy production and cellular function.

Essential Minerals

- **Calcium:** Abundant in sardines due to edible bones, crucial for bone strength.
- **Phosphorus:** Works with calcium to maintain bone and teeth health.
- **Selenium:** Acts as an antioxidant protecting cells from damage.
- **Iron:** Essential for oxygen transport in the blood.
- **Magnesium:** Supports muscle and nerve function.

Considerations and Potential Concerns

While beach cliff sardines in water offer numerous health advantages, there are some considerations to keep in mind when incorporating them into the diet. These include sodium content, allergen potential, and environmental factors.

Sodium Content

Sardines canned in water often contain added salt for preservation, resulting in moderate sodium levels. Individuals monitoring their sodium intake for hypertension or other health reasons should check labels carefully and consume sardines in moderation.

Allergy and Sensitivity Risks

Sardines are a common allergen among those sensitive to fish. People with fish allergies should avoid sardines to prevent allergic reactions. Additionally, individuals with gout or purine sensitivity may need to limit sardine consumption due to their purine content.

Mercury and Contaminant Levels

Sardines are generally considered low in mercury compared to larger predatory fish, making them a safer seafood choice. However, it is advisable to consume sardines from reputable sources to minimize exposure to environmental contaminants.

Sustainability

Beach cliff sardines are often harvested from well-managed fisheries. Choosing sustainably sourced sardines supports ocean health and ensures the long-term availability of this nutritious seafood.

Serving Suggestions and Storage Tips

Maximizing the benefits of beach cliff sardines in water involves proper serving methods and storage practices. These practices preserve nutritional quality and enhance palatability.

Serving Ideas

- Add sardines to salads for a protein boost.
- Use sardines as a topping on whole-grain crackers or toast.
- Incorporate sardines into pasta dishes or grain bowls.
- Mix sardines with lemon juice, herbs, and olive oil for a flavorful spread.

Because sardines are already cooked and canned, they are convenient for quick meals and snacks, providing a nutrient-rich option.

Storage Recommendations

Unopened cans of beach cliff sardines in water should be stored in a cool, dry place away from direct sunlight. Once opened, transfer any unused sardines to an airtight container and refrigerate, consuming within 1 to 2 days for optimal freshness and safety.

Fishman, 2019-04-04 Founded in 1836, the Maine State Museum is America's oldest state museum and is known to many as "Maine's Smithsonian" because of the breadth and diversity of its holdings—nearly a million objects covering every aspect of the state's cultural, biological, and geological history—and the thousands of stories its collections tell. For this book the museum selected and photographed 112 artifacts and specimens that, together, tell an epic story of the land and its people from prehistoric times to the present. It is a story covering 395 million years, a story told with a walrus skull and fossils, tourmaline and spear points, mammoth tusks and bone fishhooks, Norse coins and caulking irons, militia flags and survey stakes, treaty documents and wooden tankards, a temperance banner and a locomotive, Joshua Chamberlain's pistol and a cod tub trawl, a Lombard log hauler and a woman's WWII welding outfit, L. L. Bean boots and German POW snowshoes, and many more objects from the museum's collections. Short narratives written by museum curators are woven around each item—including photos of related objects—and the ensemble has been honed, polished, and introduced by museum director Bernard Fishman. This is a book that historians and Maine residents and visitors will delve into again and again, unearthing new treasures with each reading.

beach cliff sardines in water nutrition information: *Couple of Diets to Control Seizures* Gerald Yemoto, 2004-12 This is a book of two diets I tried to control my epileptic seizures. No medications seemed to control the seizures I had. Not until I seen the Charlie Foundation present an Introduction of the Ketogenic Diet, did I ever consider dieting would control my seizures. In August 1996 I began the ketogenic diet. The ketogenic diet controlled my seizure better than any medications I tried. Because of my age (adult) it was hard to seek professional help that practiced the diet, since it is practiced on children only. Dieticians of a Children's Hospital nearby did coach me though the diet. Not until seven years later did I notice that certain foods were being eaten just before I had a seizure, specifically pasta. I began researching the possible cause of seizures and gluten appeared. I looked back on my records while I was on the Ketogenic Diet and noticed I had certain foods before having seizures. Those foods had gluten in it. Gluten sensitivity is becoming more prevalent as it is studied. Being unsuccessful contacting the medical profession I decided to write a book of both diets that helped me controlling seizures. Both diets may even help weight loss.
