crash course sociology 1: Team-Based Learning in the Social Sciences and Humanities Michael Sweet, Larry K. Michaelsen, 2023-07-03 Team-Based Learning (TBL) is a unique, powerful, and proven form of small-group learning that is being increasingly adopted in higher education. Teachers who use TBL report high levels of engagement, critical thinking, and retention among their students. TBL has been used successfully in both small and large classes, in computer-supported and online classes; and because it is group work that works, it has been implemented in nearly every discipline and in countries around the world. This book introduces the elements of TBL and how to apply them in the social sciences and humanities. It describes the four essential elements of TBL – readiness assurance, design of application exercises, permanent teams, peer evaluation – and pays particular attention to the specification of learning outcomes, which can be a unique challenge in

these fields. The core of the book consists of examples of how TBL has been incorporated into the cultures of disciplines as varied as economics, education, literature, politics, psychology, and theatre. The authors explain why they felt a need to change how they taught and why they chose TBL. Furthermore, each chapter provides examples of the assignments and exercises they use to help their students achieve the specific learning outcomes of their courses. At a time of increasing course sizes, and emphasis on learning outcomes, TBL offers the means to meet such demands while connecting students to their coursework, and stimulating their intellectual engagement.

crash course sociology 1: Philosophy of Education Laura D'Olimpio, Jane Gatley, Ruth

Wareham, 2025-09-30 This textbook provides an up to date, accessible introduction to the philosophy of education with a focus on the conceptual and normative questions raised by educational policy and practice. The key concepts explored include learning, teaching, indoctrination, knowledge, equality, intelligence, virtue, and rights. Clarifying the meanings of these terms is vital for educators to be able to explain what they do and why. Such conceptual analysis helps us to address normative questions about what should or should not be done, educationally speaking. Each chapter firstly examines one key concept which is then connected to a theorised aim of education. The aims considered are rationality (i.e. critical thinking), knowledge, social justice, vocational preparation, flourishing, and political participation (citizenship). These aims of education are all hotly debated, so their strengths and weaknesses are considered. Each chapter concludes with a third section connecting the key concept and aim of education under discussion to an applied example. The applied examples include religious schools, attainment gaps in education, the educational impact of the coronavirus pandemic, the curriculum, teaching ethics in schools as a form of moral education, and citizenship education. These applied examples are drawn from vital social and political issues within education. By critically engaging with and then building upon extant literature, this book demonstrates how conceptual and normative issues within education have real world implications. At the end of each chapter, there are pedagogical resources designed to support teachers and students. These include a chapter summary, a list of recommended and further readings and online resources, as well as a list of study and research questions. This book is essential reading for all undergraduate and postgraduate students of the philosophy of education. It is also ideal for use on education theory courses and will be of interest to those studying philosophy or education.

crash course sociology 1: Life in the Middle Sherry L. Willis, James B. Reid, 1998-11-03

crash course sociology 1: Death, Life and Laughter Mathew Guest, Martha Middlemiss Lé

Mon, 2016-11-25 Birth, death and the rituals that take us from one to the other tell us a lot about humanity and our quest to understand ourselves. It is cross-disciplinary analyses of the life course that have generated the most profound insights into religion and spirituality, challenging the concepts and methods we commonly use to understand these universal aspects of human experience. Douglas Davies' work is a rare example of this kind of scholarship, challenging the boundaries that separate theology from the social sciences and that divide academia from public life. This book serves as a tribute to Davies' work and a critical commentary on the questions that arise from it. Featuring essays by renowned international scholars, this book brings cutting-edge research into conversation with ongoing debates about disciplinary difference and the nature of scholarship.

crash course sociology 1: Manifesto for a Dream Michelle Jackson, 2020-10-20

A searing critique of our contemporary policy agenda, and a call to implement radical change. Although it is well known that the United States has an inequality problem, the social science community has

failed to mobilize in response. Social scientists have instead adopted a strikingly insipid approach to policy reform, an ostensibly science-based approach that offers incremental, narrow-gauge, and evidence-informed interventions. This approach assumes that the best that we can do is to contain the problem. It is largely taken for granted that we will never solve it. In *Manifesto for a Dream*, Michelle Jackson asserts that we will never make strides toward equality if we do not start to think radically. It is the structure of social institutions that generates and maintains social inequality, and it is only by attacking that structure that progress can be made. Jackson makes a scientific case for large-scale institutional reform, drawing on examples from other countries to demonstrate that reforms that have been unthinkable in the United States are considered to be quite unproblematic in other contexts. She persuasively argues that an emboldened social science has an obligation to develop and test the radical policies that would be necessary for equality to be assured for all.

crash course sociology 1: Boy Bands and the Performance of Pop Masculinity Georgina Gregory, 2019-04-03 *Boy Bands and the Performance of Pop Masculinity* provides a history of the boy band from the Beatles to One Direction, placing the modern male pop group within the wider context of twentieth- and twenty-first-century popular music and culture. Offering the first extended look at pop masculinity as exhibited by boy bands, this volume links the evolving expressions of gender and sexuality in the boy band to wider economic and social changes that have resulted in new ways of representing what it is to be a man. The popularity of boy bands is unquestionable, and their contributions to popular music are significant, yet they have attracted relatively little study. This book fills that gap with chapters exploring the challenges of defining the boy band phenomenon, its origins and history from the 1940s to the present, the role of management and marketing, the performance of gender and sexuality, and the nature of fandom and fan agency. Throughout, the author illuminates the ways in which identity politics influence the production and consumption of pop music and shows how the mainstream pop of boy bands can both reinforce and subvert gender and class hierarchies.

crash course sociology 1: Ethnographic Free-List Data Benjamin Grant Purzycki, 2025-03-18 *Ethnographic Free-List Data: Management and Analysis With Examples in R* details a method that involves research participants listing what they know or think about the researcher's topic of interest. While researchers typically report these free-list analyses in isolation, this book incorporates them with other analytical methods and demonstrates how ethnographic free-lists can be useful to a broad social science audience. The first half of the book covers descriptive methods, and the second half incorporates insights from the early chapters into a predictive statistical framework. Author Benjamin Grant Purzycki explains how to collect, clean, and manage free-list data and how to use R to calculate and visualize the data.
