

craig handicap assessment and reporting technique

craig handicap assessment and reporting technique is a specialized method used in various fields, including occupational therapy, rehabilitation, and clinical assessments, to evaluate and document an individual's functional limitations and disabilities. This technique focuses on quantifying the degree of handicap experienced by a person due to physical, mental, or emotional impairments. The assessment and reporting process enables healthcare professionals to create personalized intervention plans, track progress, and communicate findings effectively to stakeholders such as insurance companies, employers, and legal entities. By standardizing the evaluation criteria, the Craig handicap assessment and reporting technique ensures consistency and reliability in the measurement of handicaps. This article will explore the foundations of the technique, its application process, benefits, challenges, and best practices for effective reporting.

- Understanding the Craig Handicap Assessment and Reporting Technique
- Key Components of the Assessment

- Benefits and Importance of Using the Technique
- Challenges and Limitations
- Best Practices for Effective Handicap Reporting

Understanding the Craig Handicap Assessment and Reporting Technique

The Craig handicap assessment and reporting technique is an evaluative framework developed to measure the impact of disabilities on an individual's ability to participate in daily activities and societal roles. Unlike traditional impairment assessments that focus solely on physical or mental deficits, this technique emphasizes the functional consequences and social participation restrictions resulting from those impairments. It is widely recognized in rehabilitation settings for its structured approach to quantifying handicap levels, thus facilitating targeted interventions and resource allocation.

Origins and Development

The technique was originally conceptualized to address the need for a comprehensive and standardized method of assessing handicaps beyond mere clinical symptoms. It integrates multidisciplinary perspectives, including medical, psychological, and social factors, to provide a holistic view of an individual's disability experience. Over time, the Craig handicap assessment and reporting technique has been refined to improve sensitivity, reliability, and applicability across diverse populations.

Terminology and Definitions

In this context, 'handicap' refers to the disadvantages or restrictions experienced by an individual in social, occupational, or community settings as a consequence of an impairment or disability. The technique distinguishes between impairment (the physical or mental condition), disability (functional limitations), and handicap (social consequences), which is essential for accurate assessment and reporting.

Key Components of the Assessment

The Craig handicap assessment and reporting technique encompasses several critical components that collectively provide a detailed profile of an individual's handicap status. These components ensure that assessments are comprehensive and cover all relevant dimensions of functioning and participation.

Functional Independence Evaluation

This component assesses the individual's ability to perform activities of daily living (ADLs) and instrumental activities of daily living (IADLs) independently. It evaluates mobility, self-care, communication, and cognitive functions that influence daily task performance.

Social Participation Analysis

Social participation analysis examines the extent to which the individual can engage in community activities, maintain relationships, and fulfill roles within family, work, and social environments. This analysis is crucial in identifying barriers and facilitators to participation.

Environmental and Contextual Factors

The assessment considers external factors such as the physical environment,

social attitudes, and available support systems that may affect the individual's level of handicap. Recognizing these influences allows for a more accurate understanding of the handicap and guides appropriate interventions.

Psychological and Emotional Status

Psychological wellbeing and emotional health are integral to the assessment process, as they significantly impact an individual's coping mechanisms and participation levels. The technique incorporates standardized tools to evaluate these aspects thoroughly.

Application Process of the Technique

Implementing the Craig handicap assessment and reporting technique involves a systematic approach that begins with data collection and culminates in detailed reporting. The process is designed to maximize accuracy and usefulness of the assessment outcomes.

Initial Screening and Referral

The process typically starts with an initial screening to identify individuals who may benefit from a comprehensive handicap assessment. Referrals may come from healthcare providers, employers, or social services based on observed functional limitations or participation difficulties.

Comprehensive Data Collection

Data collection involves structured interviews, direct observation, standardized questionnaires, and review of medical and social history. This multi-method approach ensures that all relevant information is captured for an accurate assessment.

Scoring and Interpretation

After data collection, scores are assigned based on predefined criteria within the Craig handicap assessment framework. The scores reflect the severity of the handicap across different domains and are interpreted to identify specific needs and intervention priorities.

Report Generation and Communication

The final step is generating a detailed report that outlines the assessment

findings, interpretations, and recommendations. The report serves as a vital communication tool among healthcare professionals, patients, and other stakeholders.

Benefits and Importance of Using the Technique

Employing the Craig handicap assessment and reporting technique offers numerous advantages that enhance the quality of care and rehabilitation outcomes for individuals with disabilities.

Standardization and Objectivity

The technique provides a standardized framework that minimizes subjective bias, ensuring consistent and objective assessment results across different evaluators and settings.

Comprehensive Understanding of Handicap

By addressing multiple dimensions of handicap, including physical, social, and psychological factors, the technique offers a holistic understanding that informs more effective intervention planning.

Facilitates Resource Allocation

Accurate handicap assessment supports decision-making related to resource allocation, such as eligibility for disability benefits, vocational rehabilitation services, and assistive technologies.

Improves Patient and Stakeholder Communication

Detailed and clear reporting enhances communication among patients, families, healthcare providers, and administrative bodies, improving transparency and shared decision-making.

Challenges and Limitations

Despite its strengths, the Craig handicap assessment and reporting technique faces certain challenges and limitations that must be acknowledged to optimize its use.

Complexity and Time Requirements

The comprehensive nature of the assessment can make the process time-consuming and resource-intensive, potentially limiting its feasibility in high-volume or resource-constrained settings.

Variability in Interpretation

Although standardized, some elements of the technique may be subject to interpretative variability depending on evaluator expertise and experience, affecting consistency.

Cultural and Contextual Sensitivity

The technique may require adaptation to different cultural contexts to accurately reflect social participation norms and environmental factors relevant to diverse populations.

Best Practices for Effective Handicap Reporting

Adhering to best practices when conducting the Craig handicap assessment and reporting technique ensures the reliability and utility of the assessment outcomes.

1. Ensure thorough training for evaluators to maintain consistency and accuracy in assessment administration and scoring.
2. Incorporate multidisciplinary perspectives to capture all relevant aspects of handicap comprehensively.
3. Utilize standardized and validated tools for functional, social, and psychological evaluations.
4. Engage the individual being assessed actively in the process to gain accurate self-reported data.
5. Maintain clear, concise, and jargon-free reporting to facilitate understanding among all stakeholders.
6. Regularly review and update assessment protocols to reflect current research and best practices.

Frequently Asked Questions

What is the Craig Handicap Assessment and Reporting Technique (CHART)?

The Craig Handicap Assessment and Reporting Technique (CHART) is a standardized tool used to measure the degree to which individuals with disabilities participate in various life activities, assessing their level of handicap in domains such as physical independence, mobility, occupation, social integration, and economic self-sufficiency.

How is CHART administered in clinical settings?

CHART is typically administered through a structured interview or questionnaire where individuals report on their participation and limitations across different life domains. Clinicians use this information to quantify the level of handicap and identify areas needing intervention.

What are the main domains assessed by CHART?

CHART assesses five main domains: Physical Independence, Mobility, Occupation, Social Integration, and Economic Self-Sufficiency, providing a comprehensive overview of an individual's functional capabilities and societal participation.

Why is CHART important for rehabilitation professionals?

CHART provides rehabilitation professionals with objective data on how disabilities impact a person's life participation, helping guide treatment planning, track progress, and evaluate the effectiveness of interventions aimed at improving community integration and quality of life.

Can CHART be used for populations other than physical disabilities?

While CHART was originally developed for physical disabilities, it has been adapted and used in various populations including individuals with brain injuries, spinal cord injuries, and other chronic health conditions to assess participation restrictions and handicap levels.

What are the limitations of the Craig Handicap Assessment and Reporting Technique?

Limitations of CHART include its reliance on self-report, which may be influenced by subjective perceptions, potential cultural biases in interpreting social integration and occupation, and that it may not capture

all aspects of handicap in certain populations or settings.

Additional Resources

1. Craig Handicap Assessment and Reporting Technique: A Comprehensive Guide

This book offers an in-depth exploration of the Craig Handicap Assessment and Reporting Technique (CHART), detailing its development, applications, and methodology. It serves as an essential resource for rehabilitation professionals looking to evaluate the social and physical functioning of individuals with disabilities. Readers will gain practical insights into administering the assessment and interpreting its results effectively.

2. Measuring Disability: The Role of the Craig Handicap Assessment and Reporting Technique

Focusing on the importance of accurate disability measurement, this book highlights how CHART contributes to understanding the impact of disabilities on daily life. It discusses the psychometric properties of CHART and compares it with other assessment tools. The text also includes case studies demonstrating the application of CHART in various clinical settings.

3. Rehabilitation Outcomes Using the Craig Handicap Assessment and Reporting Technique

This volume examines how CHART can be used to track rehabilitation progress and outcomes over time. It provides practical advice for clinicians on integrating CHART into rehabilitation programs to enhance patient care. The book also addresses challenges and solutions in using CHART for diverse patient populations.

4. Applying the Craig Handicap Assessment and Reporting Technique in Clinical Practice

Designed for healthcare practitioners, this book focuses on the practical implementation of CHART in everyday clinical environments. It covers step-by-step administration procedures, scoring guidelines, and the interpretation of results. Additionally, it discusses how CHART data can inform treatment planning and policy development.

5. Psychometric Evaluation of the Craig Handicap Assessment and Reporting Technique

This scholarly work delves into the reliability and validity studies of CHART, providing a critical analysis of its measurement properties. Researchers and students will find detailed discussions on statistical methods used to evaluate CHART's effectiveness. The book also explores potential areas for refinement and future research directions.

6. Social Integration and Disability: Insights from the Craig Handicap Assessment and Reporting Technique

This book explores how CHART assesses social participation and integration among individuals with disabilities. It discusses the instrument's role in identifying barriers to community involvement and enhancing social support systems. Through qualitative and quantitative data, the book highlights

strategies to improve social outcomes using CHART findings.

7. The Evolution of Disability Assessment: From Theory to Practice with CHART
Tracing the historical development of disability assessment tools, this book emphasizes the emergence and significance of CHART. It provides context on the theoretical frameworks that underpin CHART and its practical applications. Readers will appreciate the comprehensive overview of how disability assessment has progressed over the years.

8. Using CHART for Policy Making and Disability Advocacy
This book illustrates how data derived from CHART can influence disability policy and advocacy efforts. It highlights case studies where CHART results have informed legislative changes and resource allocation. Advocates and policymakers will find guidance on leveraging CHART to support evidence-based decision-making.

9. Training Manual for the Craig Handicap Assessment and Reporting Technique
A practical manual designed for trainers and practitioners, this book provides detailed instructions for teaching CHART administration and scoring. It includes sample forms, scoring sheets, and troubleshooting tips to ensure accurate data collection. The manual aims to standardize CHART use and improve the quality of disability assessments worldwide.

Craig Handicap Assessment And Reporting Technique

<http://devensbusiness.com/archive-library-202/pdf?docid=JRe37-8576&title=craftsman-m260-manual.pdf>

craig handicap assessment and reporting technique: Craig Handicap Assessment and Reporting Technique Gale G. Whiteneck, 1992 Includes questions in 5 dimensions: physical independence, mobility, occupation, social integration, and economic self-sufficiency

craig handicap assessment and reporting technique: *Brain Injury Medicine* Nathan D. Zasler, Douglas I. Katz, Ross Zafonte, DO, 2007 Covers the full continuum from early diagnosis and evaluation through rehabilitation, post-acute care, and community re-entry. Includes assessment and treatment, epidemiology, pathophysiology, neuroanatomy, neuroimaging, the neuroscientific basis for rehabilitation, ethical and medicolegal issues, life-care planning, and more.

craig handicap assessment and reporting technique: **Measuring Spinal Cord Injury** Giovanni Galeoto, Anna Berardi, Marco Tofani, Maria Auxiliadora Marquez, 2021-04-07 This book describes validated outcome measures for the international Spinal Cord Injury population. Based on rigorous systematic reviews of ca. 80,000 scientific articles, the authors present assessment tools for various clinical uses in the health sciences, following parameters of validity, reliability, and responsiveness. It is important for the development of clinical practice and research that practical and appropriate measures become universally accepted; this would allow comparisons and meta-analysis of high-quality randomized controlled trials of people with this increasingly common injury. This book emphasizes the need for consensus among researchers as to which tools must be studied

in depth or adapted to other national contexts, or which measurement instruments should be standardized in order to develop universal norms and standards for the performance of people with Spinal Cord Injury. It offers a valuable practical guide for clinicians, rehabilitation professionals and nurses, but will also help researchers to gain more confidence in using valid and reliable assessment tools for comparable clinical trials.

craig handicap assessment and reporting technique: *Community Rehabilitation in Neurology* Michael P. Barnes, Harriet Radermacher, 2003-09-04 Rehabilitation should not stop when the disabled person is discharged from hospital, and many neurological patients require ongoing rehabilitation in order to maximize their functional abilities, minimize complications and promote full participation at home and in the community. This book analyses community rehabilitation needs from many different perspectives, including the views of disabled people, rehabilitation clinicians and service providers. Many examples of community rehabilitation schemes are presented, with evidence for their effectiveness, and case studies are used to highlight the main issues. The authors take an international view, and there are chapters dealing with the disabled child in the community and with neuropsychological rehabilitation. This important book examines the growing trend towards community rehabilitation in neurology and is directed towards all clinicians involved with neurorehabilitation.

craig handicap assessment and reporting technique: A Compendium of Tests, Scales and Questionnaires Robyn L. Tate, 2020-08-13 This Compendium is a comprehensive reference manual containing an extensive selection of instruments developed to measure signs and symptoms commonly encountered in neurological conditions, both progressive and non-progressive. It provides a repository of established instruments, as well as newly-developed scales, and covers all aspects of the functional consequences of acquired brain impairment. In particular, the text provides a detailed review of approximately 150 specialist instruments for the assessment of people with neurological conditions such as dementia, multiple sclerosis, stroke and traumatic brain injury. Part A presents scales examining body functions, including consciousness and orientation; general and specific cognitive functions; regulation of behaviour, thought, and emotion; and motor-sensory functions. Part B reviews scales of daily living activities and community participation. Part C focuses on contextual factors, specifically environmental issues, and Part D contains multidimensional and quality of life instruments. Each instrument is described in a stand-alone report using a uniform format. A brief history of the instrument's development is provided, along with a description of item content and administration/scoring procedures. Psychometric properties are reviewed and a critical commentary is provided. Key references are cited and in most cases the actual scale is included, giving the reader easy access to the instrument. The structure of the book directly maps onto the taxonomy of the influential International Classification of Functioning, Disability and Health (World Health Organization, 2001), enabling linkage of clinical concepts across health conditions. The Compendium will be a valuable reference for clinicians, researchers, educators, and graduate students, and a practical resource for those involved in the assessment of people with brain impairment. The book is accompanied by a password protected website. For a one-off payment, purchasers of the book can gain online access to the majority of the tests, scales and questionnaires featured in the book as downloadable PDFs. See inside the book for more details.

craig handicap assessment and reporting technique: *Measuring Occupational Performance* Mary Law, Carolyn M. Baum, Winnie Dunn, 2024-06-01 As the profession of occupational therapy continues to mature and expand its practice, the measurement of occupational performance is one of the key avenues that all practicing clinicians will need to explore and master. *Measuring Occupational Performance: Supporting Best Practice in Occupational Therapy, Third Edition* summarizes the measurement tools needed to assess client occupational performance, to provide the best intervention, and to document the effectiveness of that intervention. These measurement tools are not just a compilation of all that are available for measurement relevant to occupational therapy; they are an elite group of tools carefully selected by the editors through a process of rigorous theoretical, clinical, and scientific reasoning. In this Third Edition, Drs. Mary Law, Carolyn Baum,

and Winnie Dunn have updated current chapters and added new topics that have not been covered in past editions, such as a chapter on measuring school performance, a key area of practice. Also included is a chapter on measurement principles and development to highlight the concepts common to all the measures included in the text. The Third Edition also has a focus on the best measures and measures that are used most frequently. Features of the Third Edition: Offers insight into the importance of measuring functional performance, methodologies, measurement issues, and best approach for outcome measurement Conveys a broad focus on occupational performance and offers examples from a wide range of practice settings and from multiple spots throughout the lifespan Explains the technical aspects of measurement development and methodologies and which components of functioning are to be measured and how Develops an understanding of the theoretical aspects and evidence for both standardized tests and non-standardized tests Instructors in educational settings can visit www.efacultyounge.com for additional material to be used for teaching in the classroom. New in the Third Edition: Focus on strengths-based approaches Measures health and disability at both individual and population levels using the International Classification of Functioning, Disability and Health (ICF) An emphasis on evidence-based practice and using evidence from other disciplines, not just from occupational therapy New chapter focused on school-based practice New content on reliability, validity, and responsiveness New content on goal attainment Additional material on decision making in practice In this changing health care environment, *Measuring Occupational Performance: Supporting Best Practice in Occupational Therapy*, Third Edition explains how core values and beliefs can be put into everyday practice and is the essential reference manual for the evidence-based occupational therapy and occupational therapy assistant student and practitioner.

craig handicap assessment and reporting technique: *Assessment of the Evaluations of the Application of the ICIDH to the Various Spheres of Rehabilitation and Integration of People with Disabilities* Anne Tricot, Council of Europe, 1996-01-01 On cover: Handicap and integration

craig handicap assessment and reporting technique: *Journal of Rehabilitation Research and Development* , 2008

craig handicap assessment and reporting technique: *Journal of Rehabilitation R & D* , 2003

craig handicap assessment and reporting technique: *Journal of Rehabilitation Research & Development* , 2003

craig handicap assessment and reporting technique: *Cerebral Palsy* Psiche Giannoni, Liliana Zerbino, 2022-02-27 This book helps rehabilitators and caregivers understand the multifaceted needs of children with cerebral palsy or other neuromotor impairments in order to plan and implement an effective treatment regimen. Drawing on the authors' extensive experience spanning several decades, it addresses the sensitive challenge of rehabilitation, which cannot and must not be confined by the rigid schemes of established schools. In particular, the book provides numerous practical suggestions, intended to guide the reader through correct clinical reasoning, setting goals and subsequent treatment. Furthermore, it includes chapters on evaluating and treating the upper limbs, feeding and communication problems, as well as on the care of soft tissues and the management of the visual difficulties in these children. The book is a valuable resource for physiotherapists, occupational therapists, speech therapists and other caregivers.

craig handicap assessment and reporting technique: *Traumatic Brain Injury* Jennie Ponsford, Sue Sloan, Pamela Snow, 2012 Research into the rehabilitation of individuals following Traumatic Brain Injury (TBI) in the past 15 years has resulted in greater understanding of the condition. The second edition of this book provides an updated guide for health professionals working with individuals recovering from TBI. Its uniquely clinical focus provides both comprehensive background information, and practical strategies for dealing with common problems with thinking, memory, communication, behaviour and emotional adjustment in both adults and children. The book addresses a wide range of challenges, from those which begin with impairment of consciousness, to those occurring for many years after injury, and presents strategies for

maximising participation in all aspects of community life. The book will be of use to practising clinicians, students in health disciplines relevant to neurorehabilitation, and also to the families of individuals with traumatic brain injury.

craig handicap assessment and reporting technique: *Assessment of Rehabilitative and Quality of Life Issues in Litigation* Patricia Murphy, John M. Williams, 1998-08-26 Written in response to the Supreme Court's landmark Daubert decision regarding provision of expert witness scientific testimony, *Assessment of Rehabilitative and Quality of Life Issues in Litigation* focuses on quality of life as a means of conceptualizing and measuring pain and suffering in the controversial enjoyment of life debate. The authors make a compelling argument for a quality of life paradigm based on a rehabilitation and health economics analysis, demonstrating that qualified rehabilitationists are the best experts to provide analyses of the impact of disability or injury on quality of life over the lifespan. The extensive literature review enables attorneys and litigation experts to easily access quality of life literature.

craig handicap assessment and reporting technique: *Neuropsychological Interventions* Paul J. Eslinger, 2002-02-08 This volume brings together leading clinical investigators to describe effective interventions for a wide range of neuropsychological impairments. Coverage includes cognitive impairments -- problems with attention, learning and memory, visuoperception, language, apraxia, and executive functions -- as well as neurologically based social and emotional difficulties. Presented is a framework for developing, delivering, and evaluating services that target these specific areas of functioning while promoting the individual's overall adaptation and recovery. Chapters also address the importance of multidimensional assessment, provide best practice guidelines for clinical research, and discuss the role of pharmacotherapy in cognitive rehabilitation.

craig handicap assessment and reporting technique: *Practical Psychology in Medical Rehabilitation* Maggi A. Budd, Sigmund Hough, Stephen T. Wegener, William Stiers, 2016-11-04 This easy-access guide summarizes the dynamic specialty of rehabilitation psychology, focusing on real-world practice in the medical setting. It begins by placing readers at the frontlines of practice with a solid foundation for gathering information and communicating effectively with patients, families, and staff. The book's topics run a wide gamut of patient conditions (neurological, musculoskeletal, cardiovascular), related problems (sleep and fatigue issues, depression) and practitioner responses (encouraging coping and compliance, pediatric and geriatric considerations). Models of disability and adaptation, review of competency concerns, and guidelines for group and individual therapy offer evidence-based insights for helping patients manage their health conditions, benefit from rehabilitation interventions, and prepare for their post-rehabilitation lives and activities. Coverage spotlights these core areas: ·Basics and biopsychosocial practicalities, from behavioral medicine and psychopharmacology to ethical and forensic issues. ·Populations, problems, and procedures, including stroke, TBI, substance abuse, transplants, and severe mental illness. ·Assessment and practical interventions such as pain, anxiety, cognitive functioning, and more. ·Consultation, advocacy, and interdisciplinary teams. ·Practice management, administration, and professional self-care. ·Research, technology, and program evaluation. *Practical Psychology in Medical Rehabilitation* is an essential professional development tool for novice (and a refresher for veteran) psychologists and neuropsychologists, as well as rehabilitation physicians, nurses, therapists, psychiatrists, and social workers. It presents in depth both the hallmarks of the specialty and the nuts and bolts of being a valuable team player in a medical setting.

craig handicap assessment and reporting technique: *Handbook of Neurologic Rating Scales, 2nd Edition* , Rating scales are used daily by everyone involved in the management of patients with neurologic disease and in the design and management of neurologic clinical trials. Now there is a single source for the wide range of scales used in specific neurologic diseases and neurorehabilitation. You will refer to this volume constantly! The first edition of the *Handbook of Neurologic Rating Scales* quickly became an invaluable reference work on the increasing array of scales for measuring neurologic disease. In the brief few years since the first edition the importance of this book has only increased. New Chapters Include Scales On: Generic and general use Pediatric

neurology and rehabilitation Peripheral neuropathy and pain Ataxia HIV/AIDS And instruments for diagnosing headaches. Formal measurement of the effects of neurologic disease and of treatment effects, beyond the description of changes on the standard neurologic examination, is a relatively recent development. Controlled clinical trials and outcomes research are at the heart of modern information-based medicine, and neurologic scales are essential tools in clinical trials designed to provide this information. A Resource for Clinical Trials The Handbook of Neurologic Rating Scales provides a resource for clinicians and clinical investigators in the broad field of neurology and neurologic rehabilitation to help them: evaluate the clinical trials literature by providing information on the scales being used evaluate and select appropriate and efficient scales for clinical trials and outcomes research, and provide information that will help them to develop new scales or measures or to improve existing ones. A Resource for Evaluating Disease Status Outcomes research is playing an increasingly important role in clinical management and neurorehabilitation, and these also depend largely on measurement of disease status and change. In this era of managed care, neurologists must produce outcomes data demonstrating the effectiveness of neurologic care if the specialty is to survive, and certainly if it is to thrive. Even effective therapies are likely to fall by the wayside if studies to prove their effectiveness are not done. Comprehensive and Standardized Information on All Scales Each chapter in this volume contains the scales of importance and in current use, including a sequence of scale descriptions and specific scales in a standard format, as well as a summary and recommendations indicating which scales are most useful for specific purposes and whether a combination of scales is particularly useful or if better scales are needed. Each entry notes: the purpose for which the scale was developed and its current uses if they differ from those for which it was developed a detailed description of the scale information about validation, such as: Does the scale have face validity? i.e., does it appear to measure what it purports to measure? how and by whom the scale is administered the time needed to administer and score the scale the scale itself or, when the scale is proprietary or too long for inclusion, a description and key references special considerations, including unusual measures needed to obtain a valid score or problems in administering the test in specific patients advantages, or what makes the scale good or useful. Disadvantages, or what makes the scale difficult to use or impairs its reliability key references, including the original publication of the scale and its validation Downloadable PDFs of the scales contained in the Handbook of Neurologic Rating Scales are included with the purchase of this book. The password to download the files can be found in the book itself.

craig handicap assessment and reporting technique: O'Sullivan & Schmitz's Physical Rehabilitation George Fulk, Kevin Chui, 2024-03-22 Select the most appropriate evaluation procedures Develop patient goals Implement your plan of care This book is every Physical Therapy Student's Bible. "If...you purchase this book during your first semester of PT school, it will help you immensely! Don't wait until Neuro PT to purchase this book. Use this book as a guide for every PT class from Integumentary to Pediatrics to Neuroanatomy!"—Online Reviewer A must-have for all PT's, PTA's and PT/PTA students... "Basically Wikipedia for physical therapy only has a lot more specific information pertaining to client/patient care and doesn't require a computer."—Alex N., Online Reviewer Five Stars. "This book is very comprehensive and contains almost everything you need to know for the NPTE exam."—Laura M., Online Reviewer Rely on this comprehensive, curriculum-spanning text and reference now and throughout your career! You'll find everything you need to know about the rehabilitation management of adult patients... from integrating basic surgical, medical, and therapeutic interventions to how to select the most appropriate evaluation procedures, develop rehabilitation goals, and implement a treatment plan.

craig handicap assessment and reporting technique: Spasticity, Second Edition Allison Brashear, 2015-12-09 Since publication of the first edition, Spasticity: Diagnosis and Management has been the defining reference and go-to source for physicians, therapists, and other healthcare providers who care for patients with spasticity. For this new updated edition, Dr. Brashear and a diverse team of specialists have come together to integrate new research, clinical trials, measurement tools, therapies, and other recent advances that reflect this evolving field. The book is

organized into four sections, each of which covers a broad scope of material. The first is a general overview of spasticity and its effects on movement in patients. Other chapters cover epidemiology and ancillary findings commonly associated with spasticity. Part II details assessment tools and measurements, treatment goals, and how to aim for realistic outcomes. Part III outlines various treatment modalities, including heavily updated chapters on the use of botulinum toxin in the upper and lower extremities, guidance techniques for injections, intrathecal baclofen, neuromodulation, surgery, physical therapy, and more. The last section, which contains several new chapters, discusses evaluation of outcomes and management of patients with stroke, traumatic brain injury, spinal cord injuries, multiple sclerosis, cerebral palsy, and cancer, followed by chapters on spasticity management in long-term care facilities and economic considerations. This book remains the most comprehensive guide to diagnosis and management of spasticity in adults and children, and the revised second edition will continue to serve as an invaluable resource for professionals in any discipline who strive to provide quality care to spasticity patients. Key Features: Revised edition of the premier clinical reference on spasticity Incorporates the latest advances in assessment and treatment Contains six entirely new chapters highlighting key topics including Tardieu scale and other measurement tools, ultrasound guidance for botulinum toxin management, spasticity in special populations, emerging therapies, and economic impact More than 200 figures and 70 tables accompany the updated text

craig handicap assessment and reporting technique: DeLisa's Physical Medicine and Rehabilitation: Principles and Practice Walter R. Frontera, Joel A. DeLisa, Bruce M. Gans, Lawrence R. Robinson, 2019-05-30 DeLisa's Physical Medicine and Rehabilitation, Principles and Practice presents the most comprehensive review of the state of the art, evidence-based clinical recommendations for physiatric management of disorders affecting the brain, spinal cord, nerves, bones, joints, ligaments, muscles, and tendons.

craig handicap assessment and reporting technique: Medical Aspects of Disability Myron G. Eisenberg, Robert L. Glueckauf, Herbert H. Zaretsky, 1999 This revised second edition differs from the first edition in a number of significant ways. Each chapter has been rewritten and many of them substantially revised. Several chapters were added based on feedback received from several teachers who used the text in their classes in the medical aspects of disability.
