Kirstin Munro, 2023-03-28 Based on qualitative interviews with sustainability-oriented parents of young children, this book describes what happens when people make interventions into mundane and easy-to-overlook aspects of everyday life to bring the way they get things done into alignment with their environmental values. Because the ability to make changes is constrained by their culture and capitalist society, there are negative consequences and trade-offs involved in these household-level sustainability practices. The households described in this book shed light on the full extent of the trade-offs involved in promoting sustainability at the household level as a solution to environmental problems.

i did my own research memes: *Memos, Communities and Continuous Change* Nie Hua, 2021-08-18 [Chinese Internet Vernacular,] a complex of novel language varieties associated with the Chinese internet, is usually thought to consist of an increasing host of linguistic memes currently or once virally spread. Focusing on the vernacular's most prominent character—meaning change, this book attempts to account for the different dimensions and aspects that contribute to the memes' meaning and function variations, based on the quantitative and qualitative data meticulously collected by following and recording the various memes' diffusions on Chinese social media over four years. Through the discussion of four comprehensive case studies, what we experience as noticeable meaning change throughout a viral meme's diffusion may in fact be indexical to, under different circumstances, interpersonal communicative effects, collective identities, and community affiliations, as well as larger sociocultural values and ideologies, all of which can be reflexively performed, enacted, and calibrated in social media interactions. With such efforts, this book hopes to do justice to the complexities and dynamics of the [Chinese Internet Vernacular] as a holistic sociolinguistic phenomenon.

i did my own research memes: The Robot's Rebellion Keith E. Stanovich, 2010-10-15 The idea that we might be robots is no longer the stuff of science fiction; decades of research in evolutionary biology and cognitive science have led many esteemed scientists to the conclusion that, according to the precepts of universal Darwinism, humans are merely the hosts for two replicators (genes and memes) that have no interest in us except as conduits for replication. Richard Dawkins, for example, jolted us into realizing that we are just survival mechanisms for our own genes, sophisticated robots in service of huge colonies of replicators to whom concepts of rationality, intelligence, agency, and even the human soul are irrelevant. Accepting and now forcefully responding to this decentering and disturbing idea, Keith Stanovich here provides the tools for the robot's rebellion, a program of cognitive reform necessary to advance human interests over the limited interest of the replicators and define our own autonomous goals as individual human beings. He shows how concepts of rational thinking from cognitive science interact with the logic of evolution to create opportunities for humans to structure their behavior to serve their own ends. These evaluative activities of the brain, he argues, fulfill the need that we have to ascribe significance to human life. We may well be robots, but we are the only robots who have discovered that fact. Only by recognizing ourselves as such, argues Stanovich, can we begin to construct a concept of self based on what is truly singular about humans: that they gain control of their lives in a way unique among life forms on Earth—through rational self-determination.

i did my own research memes: Binge and Bingeability Arienne Ferchaud, 2020-10-15 *Binge and Bingeability: The Antecedents and Consequences of Binge Watching Behavior* examines how the television industry has transformed over time to create the circumstances in which binge watching as a mass behavior can emerge, and what role audiences have played in the rising prevalence of this behavior. Arienne Ferchaud, recognizing that this behavior did not spring, fully formed, from streaming services, ties cultural approaches to binge watching with media psychology-oriented theories, including the concept of “bingeability”—the likelihood that a specific show will be binge watched—alongside the psychological impacts binge watching may have on viewers over time. Scholars of media studies, television studies, sociology, cultural studies, and psychology will find this book particularly useful.

i did my own research memes: Good Mentoring Jeanne Nakamura, David J. Shernoff, Charles H. Hooker, 2009-06-02 We pass on our traits through our genes but our cherished values, beliefs, and practices are transmitted through those units of meaning called memes. This remarkable book provides an authoritative account of how 'good work' endures in the sciences and has profound implications for the quality of work across the professional landscape. Howard Gardner, editor, *Responsibility at Work*, and Hobbs Professor of Cognition and Education, Harvard University This book should sow the seeds of greatness for protégés and mentors alike, and well beyond the discipline of science. Mentoring lineages are the hallmark of disciplines that endure and have impact, a reality that the authors powerfully communicate. Carol A. i did my own research memes: The Internet as a Game Jill Anne Morris, 2018-08-14 In *THE INTERNET AS A GAME*, Jill Anne Morris proposes that by defining internet arguments as games, we can analyze ad hominem and ad baculum arguments coming from online mobs and trolls using procedural rhetoric. Building upon and extending Ian Bogost's definition of procedural rhetoric and

Jesper Juul's definition of games, Morris extends the usage of the term into human systems and groups that have proceduralized their arguments online. By studying the development of online adhocracies such as 4Chan, Anonymous, and even Reddit during their early development (roughly 2006 to 2014), Morris shows how these groups have proceduralized rhetoric so that thousands of group members can speak with a single voice and singular name that they call anonymous. Morris examines these techniques to reveal their function and purpose as rhetoric. Understanding how internet arguments work can also positively affect pedagogy, especially now as social media and memes have been used to influence national elections, our views of the news, and our views of each other. Can we continue to teach only traditional rhetoric in classrooms when students will face rhetorical tropes and logic in their personal and professional lives? *THE INTERNET AS A GAME* shows why the stakes are high and the answer to this question is no.

i did my own research memes: Otherness in Communication Research Luisa Magalhaes, 2025-01-02 This book offers various perspectives from media studies, interpersonal communication, and intercultural communication on the experience and effects of being othered, excluded, and treated as less than. Its three sections cover: 1) expressions of otherness in everyday life, 2) experiences of otherness in media discourses and 3) strategies against otherness in social interaction. This book challenges the expression of otherness that is frequently related on texts of colonialism and of western social hegemonic characteristic of the Global North, therefore giving voice to perspectives from the Global South, in a pluralistic reading. The collection of contexts in which the expression of otherness is highlighted in this book, are presented in the perspective of the powerless other. As a receiver involved in a communicative process, the othered individual is approached in relation to his identitarian demonstrations, both in daily life, face-to-face and virtual contexts and in critical situations. These range from households to school and to media environments, therefore enhancing a thorough perspective on the phenomenon of othering in plural contexts.
